

Risk Management, Insurance and Reinsurance Broking Consultancy implements Data Loss Prevention

CASE STUDY | Insurance, Risk Management and more

PROFILE

Industry

Insurance, Human Capital Risk
Management and more

The Challenge

Secure a wide range of highly confidential data from leakage and loss, by controlling any kind of transfer method

The Solution

Endpoint Protector 4

Why Endpoint Protector?

- Monitors data and file transfers (E-Mail, USB, Skype, Outlook, Google Drive, etc.)
 - Prevents Data Loss
 - Intuitive and user-friendly interface
 - Fast, Localized Support
 - Lifetime Licenses and best TCO
-

AON protects a wide range of confidential data, improving security and compliance with CoSoSys' Endpoint Protector 4

About AON Indonesia

AON Indonesia was established in 1992 and is one of the preeminent & largest risk consultant, insurance and reinsurance brokers in the country. Being part of a company with an employee base of 66,000 people working in more than 120 countries, AON Indonesia offers data-driven risk evaluation, fact-based risk advice, intelligent design and execution of insurance and risk management programs.

The Challenge

As a company providing services across several industries, AON Indonesia has to protect a wide range of confidential data. The main challenge was to change end user's behavior, from free and unlimited access to data to a controlled one.

"We were looking for a solution to help us prevent data loss (customer information and business plans) especially from Agent/Marketing and Sales Department which have access to highly confidential data," says Prialaksana Januaresza, Assistant Vice President - Information Technology Head. "We needed to control how data was leaving our endpoints, either via USB and peripheral ports or file transfers to the internet via emails, cloud storage and other online applications."

"We found Endpoint Protector 4 better than other DLP Solutions, especially on File Tracing -Content Aware Protection features, as well as end-users' Activity Details and Control."

Assistant Vice President
Information Technology Head
Prialaksana Januarezsa

About Endpoint Protector Security Solutions

Endpoint Protector 4 protects Windows, Macs and Linux computers against data loss, data theft and data leakage by controlling portable storage devices like USB sticks, CDs/DVDs, HDDs, memory cards and others. For Windows and Mac OS X systems, Endpoint Protector even monitors and blocks file transfers to online services and applications like e-mail, Skype, web browsers and many others. It provides strong security policies, preventing users from taking unauthorized data outside the company. Endpoint Protector allows companies to stay productive while keeping their most valuable data safe. Endpoint Protector makes work more convenient, secure and enjoyable using mobile and portable devices, and delivers excellent ROI.

The Solution

AON Indonesia tested other solutions, but decided that the Endpoint Protector 4 solution from CoSoSys met its needs better than other DLP solution. Endpoint Protector 4 offers both security and operational efficiencies. "We especially liked the File Tracing and Content Aware Protection functionality. Also, the end-users' Activity Details and Control made the solution meet and exceed our expectations," says Prialaksana Januarezsa. "It gave us the tools needed to change the behavior of our users, from a free and unlimited access to a controlled one."

Endpoint Protector does not only provide features that exceed Januarezsa's expectations but does so at competitive prices. "Endpoint Protector 4 provides Lifetime License, so pricing and TCO is excellent," says Januarezsa.

Endpoint Protector 4 includes Content Aware Protection, and was implemented as a Hardware Appliance, protecting a network of Windows 7 computers. It is used to provide granular advanced control over which data can go out of the organization through various devices and online applications – without interfering with user productivity.

The deployment was fast and intuitive with Endpoint Protector 4 user-friendly interface. "The response of Local Support within the same regional time zone is very fast, including site visit and remote support – through the local distributor – HalodataIndonesia," says Januarezsa.
